

Purpose: To ensure employees understand management’s expectations for accident prevention and control.

Scope: Outline precautionary steps to take in order to prevent an incident/accident from occurring

Date: _____

Facility: _____

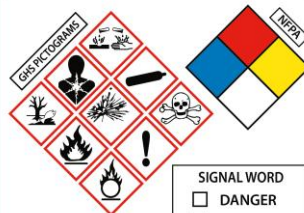

Title: Secondary Labels for Chemicals

Precautionary Steps to be Taken:

-  **All containers of chemicals or hazardous products must be clearly labeled.** This includes labels on cans, boxes, bags, bottles, barrels, cylinders, tanks, and storage containers.
-  Do not remove labels from containers. Doing so could lead to someone unknowingly being exposed to a harmful product. Report all unlabeled containers to your supervisor at once.
-  Make sure labels are legible; always use permanent ink. If you cannot read the label, then the container might as well not be labeled at all.
-  Do not pour the contents of a labeled container into an unlabeled secondary container. This includes spray bottles, fuel cans, sprayer tanks, dip pans, or other secondary containers. The time must be taken to first place a label that displays all the required information onto the new container.
-  Take the time to look at the label when you pick up any container!
-  **Make sure you are wearing the right PPE for the chemical you’re about to use, and that you don’t accidentally mix it with an incompatible material or cause yourself or co-workers an injury.**
-  **Always refer to the SDS if you’re unsure what the chemical is, what hazards it contains, how to fill out the label, etc.**
